

Resume Keyword Extractor using Python, Streamlit and Regular Expressions

Introduction

This project automates extraction of important information from text resumes using Python Regular Expressions and Streamlit.

Objectives

Automate resume screening, extract contact details, skills, education, experience and projects.

Technologies

Python, Streamlit, Regular Expressions (Regex).

Modules

Resume upload, parsing, email, phone, LinkedIn, GitHub, skills, education, experience and project extraction.

Workflow

Upload Resume -> Read Text -> Regex Matching -> Extract Information -> Display Results.

Advantages

Fast, simple, lightweight, user-friendly.

Limitations

Supports only TXT files and predefined keywords.

Future Scope

Support PDF/DOCX, NLP, AI-based extraction, ATS scoring, database integration.

Conclusion

Demonstrates automated resume parsing and serves as a foundation for advanced ATS systems.
